- a) Attractive
- b) Repulsive
- c) Zero
- d) Depends on the distance only

Answer: a) Attractive

Explanation: Parallel currents in the same direction attract each other due to magnetic field interactions, whereas currents in opposite directions repel.

Electrical Machines

Q5: The main function of an alternator is:

- a) Convert mechanical energy into electrical energy
- b) Convert electrical energy into mechanical energy
- c) Store electrical energy
- d) Regulate voltage

Answer: a) Convert mechanical energy into electrical energy

Explanation: An alternator is a type of generator that converts mechanical energy into alternating electrical current, typically used in power stations.

Q6: The efficiency of a transformer is maximum when:

- a) No load
- b) Full load
- c) No load and full load are the same
- d) When the core is laminated

Answer: b) Full load

Explanation: Transformer efficiency is highest near full load because the core and copper losses are proportionally less relative to the power transferred.

Control Systems

Q7: The transfer function of a unity feedback system with an open-loop transfer function $G(s)H(s) = K / s(1 + sT)$ is:

- a) $K / s(1 + sT)$
- b) $s(1 + sT) / K$
- c) $1 / [1 + G(s)H(s)]$
- d) $K / (1 + sT)$

Answer: a) $K / s(1 + sT)$

Explanation: The transfer function of the open-loop system is given directly as $G(s)H(s)$, which is provided as $K / s(1 + sT)$.

Digital Electronics

Q8: Which logic gate outputs true only when exactly one input is true?

- a) AND
- b) OR
- c) XOR
- d) NOR

Answer: c) XOR

Explanation: The XOR (exclusive OR) gate outputs true only when an odd number of inputs are true, which for two inputs means exactly one input is true.

QuestionAnswer What is the primary purpose of a transformer in electrical engineering? A transformer is used to transfer electrical energy between two or more circuits through electromagnetic induction, primarily to change voltage levels efficiently. Which law states that the total current entering a junction equals the total current leaving it? Kirchhoff's Current Law (KCL). What is the unit of electrical resistance? Ohm (Ω). In a DC circuit, what does a resistor do? A resistor limits the flow of current and drops voltage within the circuit. Which component is used to store electrical energy in an electric field? A capacitor. What is the function of a circuit breaker? A circuit breaker automatically disconnects the electrical circuit in case of overload or short circuit to prevent damage and ensure safety. Which type of motor is commonly used in household appliances? Universal motor or induction motor, depending on the application.
