Sample PALS Test Questions and Answers from 2011

To better understand the nature of the 2011 PALS exam, here are some representative questions along with detailed explanations of the correct answers.

Question 1: Airway and Breathing Management

Q: A 2-year-old child presents with difficulty breathing, nasal flaring, and stridor. The child is alert but appears distressed. What is the most appropriate initial management step?

- A) Administer a high-flow oxygen via face mask
- B) Prepare for advanced airway intubation
- C) Provide continuous positive airway pressure (CPAP)
- D) Perform immediate endotracheal intubation

A: A) Administer a high-flow oxygen via face mask

Explanation:

In pediatric emergencies, maintaining oxygenation is the priority. For a child with respiratory distress and signs like nasal flaring and stridor, providing high-flow oxygen helps improve oxygenation and reduce work of breathing. Advanced airway interventions like intubation are considered if the child's condition deteriorates or if less invasive measures fail.

Question 2: Recognition of Cardiac Rhythms

Q: An ECG strip shows a narrow-complex tachycardia at a rate of 220 bpm in a 4-year-old. The child is alert but experiencing palpitations. What is the most appropriate next step?

- A) Begin synchronized cardioversion
- B) Administer adenosine IV rapid bolus
- C) Perform vagal maneuvers
- D) Start CPR immediately

A: C) Perform vagal maneuvers

Explanation:

In stable children with narrow-complex tachycardia, vagal maneuvers are the first-line intervention to attempt to terminate the rhythm. If vagal maneuvers are unsuccessful, adenosine administration is indicated. Synchronized cardioversion is reserved for unstable patients or when vagal maneuvers and medication fail.

Question 3: Circulatory Failure and Shock

Q: A 6-month-old infant shows signs of pallor, weak pulses, and delayed capillary refill. The child is tachycardic and hypotensive. Which type of shock is most likely?

- A) Hypovolemic shock
- B) Cardiogenic shock
- C) Distributive shock
- D) Obstructive shock

A: A) Hypovolemic shock

Explanation:

Signs of pallor, weak pulses, delayed capillary refill, tachycardia, and hypotension are indicative of hypovolemic shock, often due to dehydration or blood loss. Initial management involves rapid fluid resuscitation with isotonic fluids.
