Introduction to the NIST Handbook of Mathematical Functions

Historical Background and Development

The NIST Handbook of Mathematical Functions, often referred to as the "Digital Library of Mathematical Functions" (DLMF) in its online incarnation, traces its origins to the seminal "Handbook of Mathematical Functions" published in 1964 by the National Bureau of Standards (now NIST). Edited by Milton Abramowitz and Irene A. Stegun, this pioneering volume served as the gold standard for mathematical references for decades. Recognizing the rapid evolution of computational methods and the need for updated, accessible information, NIST launched an ambitious project to revise and expand this foundational work.

The result was the 2010 publication of the NIST Handbook of Mathematical Functions, authored by Frank W. J. Olver, et al., which modernized the presentation, incorporated new mathematical insights, and integrated computer algebra system data. The paperback edition makes this valuable resource more accessible to a broader audience, combining portability with comprehensive content.

Purpose and Audience

Designed as a definitive reference, the handbook aims to:

- Provide detailed descriptions, properties, and formulas for a wide array of special functions.
- Support scientific computation by offering accurate numerical data and asymptotic behaviors.

- Aid in educational settings by serving as a teaching resource.
- Assist engineers and applied scientists in solving real-world problems involving complex functions.

Its primary users include mathematicians, physicists, statisticians, engineers, and computer scientists who require reliable, well-organized information about functions that underpin many scientific models.
