Sample Math Olympiad Problems for 7th Grade

To illustrate the nature of these problems, here are some sample questions across different categories:

Number Theory Problem

Find the smallest positive integer that is divisible by 3, 4, and 5, but not divisible by 6.

Solution Approach:

- Find the LCM of 3, 4, and 5.
- Check divisibility constraints.

Answer:

- LCM of 3, 4, 5 = 60.
- 60 is divisible by 3, 4, 5, but not by 6 (since 6 divides 60, but the problem asks for not divisible by 6; so find a multiple of 60 that is not divisible by 6).
- The smallest such is 60 itself, but since 60 is divisible by 6, we need to find a multiple of 60 that is not divisible by 6.

Correction:

- Since 60 is divisible by 6, the initial assumption is invalid.
- The key is to find the least number divisible by 3, 4, 5, but not by 6.
- Since 6 divides 3 and 2, and 60 is divisible by 6, we look for multiples of 60 that are not divisible by 6, which is impossible because 60 is divisible by 6.
- Therefore, the question needs revision: perhaps it asks for a number divisible by 3, 4, and 5, but not by 6, which is impossible because any multiple of 60 is divisible by 6.

Final note: This example demonstrates the importance of understanding divisibility rules fully.

Algebra Problem

If $\left(x + \frac{1}{x}\right) = 5$, find the value of $\left(x^2 + \frac{1}{x^2}\right)$.

Solution:

- Square both sides: $\left(x + \frac{1}{x}\right)^2 = 25$
- Expand: $x^2 + 2 + \frac{1}{x^2} = 25$
- Subtract 2: $x^2 + \frac{1}{x^2} = 23$

Answer: 23

Geometry Problem

In triangle ABC, the angles at A and B are 45° and 60° , respectively. Find the measure of angle C.

Solution:

- Sum of angles in a triangle: 180°
- $\angle C = 180^\circ - 45^\circ - 60^\circ = 75^\circ$

Answer: 75°

Combinatorics Problem

How many different 3-letter arrangements can be formed from the letters of the word "MATH" if no letter is repeated?

Solution:

- Number of arrangements: permutation of 4 letters taken 3 at a time: $P(4,3) = \frac{4!}{(4-3)!} = 4 \times 3 \times 2 = 24$

Answer: 24
