Understanding different types of costs is essential for managerial decision-making. Hilton emphasizes the importance of classifying costs to analyze their behavior and impact on business operations.

- **Fixed Costs:** Costs that remain constant regardless of production volume (e.g., rent, salaries)
- **Variable Costs:** Costs that vary directly with production levels (e.g., raw materials, direct labor)
- **Mixed Costs:** Costs that contain both fixed and variable components (e.g., utility bills)

Cost Behavior and Decision-Making

Hilton highlights that understanding how costs behave with changing activity levels is crucial for planning and control. Managers use cost behavior analysis to predict how costs will change and to make decisions regarding pricing, production levels, and product line selection.

Cost-Volume-Profit Analysis

A core tool in managerial accounting, CVP analysis, helps managers understand the relationships among costs, volume, and profit. It assists in determining the breakeven point and evaluating the profit impact of different sales volumes or cost structures.

Costing Systems and Methods

Job Order Costing

Used when products are manufactured based on specific customer orders, job order costing accumulates costs for each individual job. Hilton discusses its importance in industries like construction, custom manufacturing, and professional services.

Process Costing

Applicable in continuous production environments, process costing averages costs over large quantities of similar units. Hilton notes its use in industries such as chemicals, textiles, and food processing.

Activity-Based Costing (ABC)

ABC assigns overhead costs to products based on activities that drive costs. Hilton emphasizes its role in providing more accurate product costing, especially when traditional costing methods distort costs due to diverse activities.
