A fraction represents a part of a whole, expressed as $\frac{\text{numerator}}{\text{denominator}}$. Key properties include:

- Simplification: reducing fractions to lowest terms
- Equivalent fractions: different fractions representing the same value
- Operations: addition, subtraction, multiplication, division

Common Strategies for GMAT

- Cross-multiplied comparisons
- Finding common denominators for addition/subtraction
- Recognizing special fractions (e.g., $\frac{1}{2}$, $\frac{3}{4}$)

- Decimals

Definition and Conversion

Decimals are another way to represent fractions, especially those with denominators as powers of 10. Conversion techniques include:

- From fractions: divide numerator by denominator
- From percents: move the decimal point two places left

Operations with Decimals

- Addition and subtraction aligned by decimal points
- Multiplication and division using standard algorithms
- Rounding and estimating for quick calculations

- Percents

Definition and Usage

Percents are ratios expressed per 100. They are frequently used in:

- Data interpretation
- Profit and loss calculations
- Growth rates
- Discounts and markups

Key Formulas

- $\text{Part} = \text{Percent} \times \text{Whole}$
- $\text{Percent Change} = \left(\frac{\text{New} - \text{Old}}{\text{Old}} \right) \times 100$
- Percentage Increase/Decrease calculations

Conversion Techniques and Relationships

Understanding how to convert between fractions, decimals, and percents is fundamental. Here are essential conversion methods:

Conversion between Fractions and Decimals

- To convert a fraction to a decimal: divide numerator by denominator
- To convert a decimal to a fraction: write as a fraction and simplify

Conversion between Decimals and Percents

- Decimal to percent: move decimal point two places right and add '%'
- Percent to decimal: move decimal point two places left

Conversion between Fractions and Percents

- Fraction to percent: convert to decimal, then multiply by 100
- Percent to fraction: write percent over 100 and simplify

Common GMAT Problems Involving Fractions, Decimals, and Percents

- Conversion questions: Convert ? to decimal and percent
- Word problems: Calculating discounts, interest, or growth
- Data interpretation: Analyzing charts involving percentages
- Ratios and proportions: Solving for unknown quantities

Sample Problems and Solutions

Problem 1:

If $\frac{3}{8}$ of a class are girls, what percentage of the class are girls?

Solution:

Convert $\frac{3}{8}$ to a decimal: $(3 \div 8 = 0.375)$

Then, to percent: $(0.375 \times 100 = 37.5\%)$

Answer: 37.5%

Problem 2:

A shirt is discounted by 25%. If the original price is \$40, what is the sale price?

Solution:

Calculate the discount: $(25\% \times \$40 = 0.25 \times \$40 = \$10)$

Subtract from original: $\$40 - \$10 = \$30$

Answer: \ \$30

Question What is a fraction and how is it related to decimals? A fraction shows parts of a whole, like $\frac{1}{2}$, while a decimal represents the same part in a decimal form, like 0.5. Both are ways to express parts of a whole. How can I convert a simple fraction to a decimal? Divide the numerator (top number) by the denominator (bottom number). For example, $\frac{1}{2}$ becomes 1 divided by 2, which equals 0.5. What is an easy activity to compare two fractions? Find common denominators and see which numerator is bigger. For example, compare $\frac{1}{4}$ and $\frac{1}{2}$ by converting $\frac{1}{2}$ to $\frac{2}{4}$, so $\frac{1}{4}$ vs $\frac{2}{4}$? $\frac{2}{4}$ is bigger. How can I practice adding fractions and decimals? Use simple examples like $\frac{1}{4} + \frac{1}{4}$ or $0.2 + 0.3$ by lining up decimal points or common denominators, then adding or subtracting. What is a fun activity to learn about fractions and decimals? Use a pizza or a cake divided into slices to visualize fractions, then convert those slices into decimal form to see the connection. How do I convert decimals to fractions? Write the decimal as a fraction with 1 as the denominator, then multiply numerator and denominator to make it a whole number. For example, $0.75 = \frac{75}{100}$, which simplifies to $\frac{3}{4}$. What are some easy games to practice fractions and decimals? Playing matching games where you match equivalent fractions and decimals, or using number line games to place

decimals and fractions in order. Why is it important to learn about fractions and decimals at this age? Because they help you understand parts of a whole and how numbers work, which are important skills for more advanced math and real-life situations. Can I use everyday objects to learn about fractions and decimals? Yes! Use things like chocolate bars, apples, or coins to cut into parts and see how those parts relate to decimals and fractions.
