- **Conditions necessary:** Extremely high temperatures (millions of degrees) and pressures to overcome electrostatic repulsion.
- **Energy release:** According to Einstein's equation, $E=mc^2$, a small amount of mass converts into a large amount of energy.

2. Nuclear Fission

Fission is the splitting of a heavy nucleus into lighter nuclei, releasing energy, neutrons, and radioactive byproducts.

- **Definition:** Fission involves a heavy nucleus, such as uranium-235 or plutonium-239, splitting into lighter nuclei.
- **Process:** Often initiated by neutron absorption, leading to chain reactions.
- **Conditions necessary:** Availability of fissile material and conditions for a controlled chain reaction.
- **Energy release:** Similar to fusion, mass difference results in energy release per Einstein's equation.

Comparison of Fusion and Fission

To deepen understanding, create a comparative chart highlighting key differences and similarities:

Aspect	Fusion	Fission
Process	Combining light nuclei	Splitting heavy nuclei
Occurs naturally	Yes, in stars and the sun	Yes, in nuclear reactors
