Writing Your First Lua Script on ESP8266

Basic Commands and Scripts

Once connected, you can start entering Lua commands directly, or upload scripts for automation.

Example 1: Blink an LED

```
``lua

-- Define GPIO pin

local ledPin = 1 -- GPIO5 on NodeMCU

-- Configure pin as output

gpio.mode(ledPin, gpio.OUTPUT)

-- Blink function

function blink()

  gpio.write(ledPin, gpio.HIGH)

  tmr.delay(500000) -- 0.5 seconds

  gpio.write(ledPin, gpio.LOW)

  tmr.delay(500000)

end

-- Call blink repeatedly

while true do
```

```
blink()
```

```
end
```

```
...
```

Note: Use `tmr.delay()` carefully; it's blocking. For non-blocking operations, use timers.

Example 2: Connect to Wi-Fi

```
```lua
```

```
wifi.setmode(wifi.STATION)
```

```
wifi.sta.config({ssid="YourWiFiSSID", pwd="YourWiFiPassword"})
```

```
wifi.eventmon.register(wifi.eventmon.STA_GOT_IP, function(info)
```

```
print("Connected with IP: " .. info.IP)
```

```
end)
```

```
wifi.eventmon.register(wifi.eventmon.STA_DISCONNECTED, function(info)
```

```
print("Disconnected: " .. info.reason)
```

```
end)
```

```
...
```

This connects your ESP8266 to Wi-Fi and reports the assigned IP address.

### Uploading Lua Scripts to ESP8266

While you can enter commands directly via serial, for larger projects, you'll want to upload scripts.

- Use tools like [ampy](#) or [NodeMCU PyFlasher](#).
- Alternatively, use the integrated development environment (IDE) like [NodeMCU Editor](#) or [MicroPython](#) with compatible firmware.

## Common Tasks and Tips for Programming ESP8266 in Lua

### 1. Managing GPIO Pins

To control hardware components, you'll frequently manipulate GPIO pins.

- **Set pin as output:** ``gpio.mode(pin, gpio.OUTPUT)``
- **Write HIGH:** ``gpio.write(pin, gpio.HIGH)``
- **Write LOW:** ``gpio.write(pin, gpio.LOW)``

### 2. Using Timers

Timers are essential for non-blocking delays and scheduling tasks.

```
``lua

tmr.create():alarm(1000, tmr.ALARM_SINGLE, function()

print("One second passed")

end)

...

```

### 3. Connecting to Web Servers

Lua provides simple HTTP client functions to fetch data or communicate with servers.

```
``lua

http.get("http://example.com", nil, function(code, data)

if (code == 200) then

print("Response: " .. data)

end

end)

```

```

4. Saving Scripts for Persistent Storage

Use the `file` API to save scripts or configuration data onto the ESP8266's flash memory.

```
```lua

file.open("main.lua", "w")

file.write("print('Hello, World!')")

file.close()

```
```

Set your device to run this script on startup by placing it in `init.lua`.

Debugging and Troubleshooting

- Connection Issues: Ensure proper driver installation and correct COM port selection.
- Firmware Compatibility: Make sure you're flashing the correct firmware version compatible with your hardware.
- Script Errors: Use print statements for debugging and check the serial console for errors.
- Wi-Fi Connectivity: Confirm your SSID and password are correct, and your router isn't blocking the device.

ESP8266 Lua Programming: A Comprehensive Guide to Getting Started

The ESP8266 has revolutionized the world of DIY electronics and IoT projects with its affordability, versatility, and built-in Wi-Fi capabilities. Among its many programming options, Lua—a lightweight, efficient scripting language—stands out for its simplicity and ease of use, especially through the NodeMCU firmware. If you're eager to harness the full potential of your ESP8266 using Lua, this in-depth guide will walk you through everything you need to know, from setup to advanced programming.

Introduction to ESP8266 and Lua

The ESP8266 is a low-cost Wi-Fi microchip with a full TCP/IP stack and microcontroller capability, making it ideal for IoT projects. While it can be programmed in various languages like C++ (via Arduino IDE), MicroPython, and JavaScript, Lua remains a popular choice due to its lightweight nature and straightforward scripting environment.

Why Lua for ESP8266?

- Minimal resource consumption, suitable for devices with limited RAM and flash.
- Easy to learn, with a simple syntax.
- Rapid development and deployment of scripts.
- Active community support, especially through NodeMCU firmware.

NodeMCU Firmware:

This open-source firmware replaces the default firmware on ESP8266 with a Lua interpreter, enabling scripting directly on the device. It simplifies development and provides a rich set of modules for GPIO, Wi-Fi, HTTP, and more.

Getting Started: Hardware and Software Requirements

Hardware Needed

- ESP8266 Module: Such as NodeMCU, Wemos D1 Mini, or generic ESP8266 boards.
- USB Cable: For connecting the ESP8266 to your computer.

- Power Supply: Usually via the USB port; ensure your power source supplies sufficient current (at least 500mA).
- Optional Peripherals: Sensors, LEDs, relays, etc., for project expansion.

Software Requirements

- A Computer: Windows, macOS, or Linux.
- USB-to-Serial Driver: If necessary, depending on your ESP8266 board.
- Serial Communication Tool: Such as PuTTY, Tera Term, or screen.
- ESP8266 Flashing Tool: Such as esptool.py (Python-based) or NodeMCU Flasher.
- NodeMCU Firmware with Lua: Precompiled or compile your own.
- A Code Editor: Notepad++, Visual Studio Code, or any plain text editor.

Flashing NodeMCU Firmware with Lua onto ESP8266

Before programming, you must install the Lua interpreter on your ESP8266, which involves flashing the NodeMCU firmware.

Step-by-Step Firmware Flashing

- Download the Firmware:

Visit the [NodeMCU firmware releases](<https://github.com/nodemcu/nodemcu-firmware>) and download the latest precompiled binary, typically named `nodemcu-flasher` or `nodemcu-firmware.bin`.

- Install Flashing Tool:

Use esptool.py if you prefer command-line or a GUI tool like NodeMCU Flasher.

- Connect Your ESP8266:

Ensure your device is in bootloader mode (often by pressing and holding the FLASH button while resetting).

- Flash the Firmware:

Using esptool.py, run a command similar to:

```
```bash
esptool.py --port /dev/ttyUSB0 write_flash 0x00000 path/to/nodemcu-firmware.bin
```
```

Replace `/dev/ttyUSB0` with your port and the path with your firmware location.

- Verify Installation:

Once flashed, disconnect and reconnect the device to ensure it boots into Lua interpreter mode.

Connecting to the ESP8266 with Lua

Serial Communication Setup

To interact with your ESP8266, connect it to your computer via USB. Use a terminal program:

- Baud Rate: Typically 115200 bps.
- Data Bits: 8.
- Parity: None.
- Stop Bits: 1.

Once connected, you should see a prompt similar to:

```
```
>
```
```

This indicates Lua interpreter readiness.

Using an IDE or Text Editor

While the serial terminal is great for quick commands, for larger scripts, consider using:

- ESPlorer: A Java-based IDE tailored for ESP8266 Lua development.
- Visual Studio Code: With plugins for serial communication and file transfer.
- NodeMCU PyFlasher or Web-based IDEs: For uploading scripts.

Programming the ESP8266 in Lua: Core Concepts

Understanding the Lua Environment

The Lua interpreter provides a REPL (Read-Eval-Print Loop), allowing you to execute commands interactively. Scripts can be saved to the device's filesystem (`init.lua`, `main.lua`, etc.) and run automatically on startup.

Basic Lua Syntax and Commands

- Variables: `x = 10`
- Functions: ``lua

```
function blink()
```

```
-- code
```

```
end
```

```
``
```

- Modules: `wifi`, `gpio`, `net`, etc.

Common Modules and Their Usage

| Module | Purpose | Example Usage |
|--------|---------------------|----------------------------|
| gpio | Control pins | gpio.write(1, gpio.HIGH) |
| wifi | Wi-Fi configuration | wifi.setmode(wifi.STATION) |
| net | Networking | net.createConnection() |

| `tmr` | Timers | `tmr.create():alarm(1000, tmr.ALARM\_SINGLE, function() end)` |

Sample Projects and Code Snippets

Connecting to Wi-Fi

```
```lua

wifi.setmode(wifi.STATION)

wifi.sta.config({ssid="YourSSID", pwd="YourPassword"})

wifi.eventmon.register(wifi.eventmon.STA_GOT_IP, function(info)

print("Connected! IP: " .. info.IP)

end)

wifi.eventmon.register(wifi.eventmon.STA_DISCONNECTED, function(info)

print("Disconnected. Reason: " .. info.reason)

end)

wifi.eventmon.start()

```
```

This code sets up the ESP8266 as a Wi-Fi station and provides basic connection feedback.

Controlling an LED

```
```lua

local ledPin = 1 -- GPIO5 (D1 on NodeMCU)

gpio.mode(ledPin, gpio.OUTPUT)

-- Blink function

function blink()
```

```

gpio.write(ledPin, gpio.HIGH)

tmr.create():alarm(500, tmr.ALARM_SINGLE, function()

gpio.write(ledPin, gpio.LOW)

end)

end

blink()

...

```

This simple script blinks an LED connected to GPIO5 every half-second.

## Advanced Topics: Expanding Your ESP8266 Lua Projects

### HTTP Server and Client

Lua scripts can create web servers or perform HTTP requests, enabling remote control and data retrieval.

- Creating a Web Server:

```

```lua

srv=net.createServer(net.TCP)

srv:listen(80,function(conn)

conn:on("receive",function(sck,payload)

sck:write("HTTP/1.1 200 OK\r\nContent-Type: text/html\r\n\r\n")

sck:write("

Hello from ESP8266 Lua!

")

end)

```

```
conn:on("sent",function(sck) sck:close() end)
```

```
end)
```

```
...
```

- Making HTTP Requests:

```
```lua
```

```
local http = require("http")
```

```
http.get("http://example.com", nil, function(code, data)
```

```
if (code == 200) then
```

```
print(data)
```

```
end
```

```
end)
```

```
...
```

## Sensor Integration

Using GPIO pins, ADC, or I2C peripherals, Lua scripts can read sensor data and send it over Wi-Fi.

## Best Practices and Troubleshooting

- File Management: Use ``init.lua`` for startup scripts; store additional code in separate files for modularity.
- Memory Optimization: Keep scripts lightweight; avoid large modules or unnecessary variables.
- Debugging: Use serial output (``print()``) extensively; consider using ``node.restart()`` to recover from errors.
- Firmware Updates: Re-flash firmware carefully; always backup existing scripts.

Common Issues:

- Connection failures: Check SSID/password.
- Flashing errors: Confirm correct firmware version and flash commands.
- Script errors: Review syntax, especially for missing `end` statements or typos.

define DHTTYPE DHT22

const char ssid = "tu_red_wifi";

const char password = "tu_contraseña_wifi";

DHT dht(DHTPIN, DHTTYPE);

void setup() {

```

```
Serial.begin(115200);

delay(10);

WiFi.begin(ssid, password);

while (WiFi.status() != WL_CONNECTED) {

  delay(500);

  Serial.print(".");

}

Serial.println("WiFi conectado");

dht.begin();

}

void loop() {

  float temperatura = dht.readTemperature();

  if (isnan(temperatura)) {

    Serial.println("Error leyendo el sensor");

    return;

  }

  // Enviar datos a la nube (ejemplo con HTTP POST)

  // Código para conectar y enviar datos a ThingSpeak o similar
