## Understanding the Cooling Fan System in a 1990 Geo Tracker

### Overview of the Cooling System

The cooling system in a 1990 Geo Tracker is designed to maintain the engine at an optimal operating temperature. It primarily consists of the radiator, water pump, thermostat, coolant, and the electric or mechanical cooling fan. The electric cooling fan is activated when the engine reaches a certain temperature, or when the air conditioning is turned on, providing additional airflow through the radiator.

### Types of Cooling Fans

- Mechanical Fans: Driven directly by the engine via a belt and clutch.
- Electric Fans: Operated via an electric motor, controlled by a temperature sensor or relay.

Most 1990 Geo Trackers use electric fans, which are more efficient and easier to control electronically.

## Key Components of the 1990 Geo Tracker Cooling Fan Wiring System

Understanding the wiring diagram requires familiarity with the core components involved:

- **Cooling Fan Motor:** The electric motor that powers the fan blades.
- **Temperature Sensor / Switch:** Detects coolant temperature and signals the fan to turn on.

- **Relays:** Electromechanical switches that control high-current flow to the fan based on the sensor signals.
- **Fuses and Fusible Links:** Protect the circuit from overloads.
- **Power Source:** Usually supplied directly from the vehicle's battery or ignition switch.
- **Ground Connection:** Completes the electrical circuit for the fan motor.

## Interpreting the 1990 Geo Tracker Cooling Fan Wiring Diagram
