Short-Answer Question Example

Question: Explain the factors that influence climate in a region.

Model Answer (from Memorandum):

Climate is influenced by several factors including latitude (distance from the equator), altitude (height above sea level), proximity to water bodies (which moderate temperature), prevailing winds, ocean currents, and topography. These factors determine temperature, rainfall patterns, and humidity levels in a region.

Long-Answer Question Example

Question: Discuss the impact of urbanization on the environment.

Model Answer (from Memorandum):

Urbanization leads to increased pollution, as more vehicles, industries, and human activities produce waste and emissions. It results in the loss of natural habitats and green spaces, leading to biodiversity decline.
