Located at the bottom or side of the drawing, the title block contains critical information, such as:

- Drawing title
- Drawing number or code
- Scale
- Name of the draughtsman
- Date of creation or revision
- Material specifications
- Company or project details

- Views

Since three-dimensional objects are represented in two dimensions, multiple views are used to depict all features clearly:

- Orthographic Views: Typically include front, top, and side views.
- Sectional Views: Show internal features by cutting through the object.
- Isometric Views: Provide a 3D perspective to aid visualization.

- Lines and Symbols

Different types of lines convey specific information:

- Visible lines: Solid thick lines outlining the object.
- Hidden lines: Dashed lines indicating features not visible in the current view.

Symbols are used to denote finishes, tolerances, welding, and other specifications.

- Dimensions and Tolerances

Precise measurements are fundamental:

- Linear dimensions: Lengths, widths, heights.
- Angular dimensions: Angles between surfaces.
- Tolerances: Allowable deviations from specified dimensions, critical for ensuring fit and function.

Standard Practices and Conventions

To ensure clarity and uniformity, engineering drawings follow established standards, primarily governed by organizations like the International Organization for Standardization (ISO) and the American National Standards Institute (ANSI).

- Projection Methods

- First-Angle Projection: Common internationally; views are projected onto planes behind the object.

- Third-Angle Projection: Predominant in North America; views are projected onto planes in front of the object.

- Line Types and Weights

Different line types and thicknesses are used to distinguish features:

- Continuous thick lines for visible edges.
- Dashed lines for hidden features.
- Thin lines for dimension lines, extension lines, and leader lines.

- Scale

Drawings are scaled representations of real objects. Common scales include 1:1 (full size), 1:2, 1:10, etc., depending on the size of the object and detail level.

Types of Engineering Drawings

Different purposes dictate various types of drawings, each serving specific needs.

- Assembly Drawings

Show how different parts fit together to form a complete unit. They include exploded views, which depict the parts separated but aligned for clarity.

- Detail Drawings

Focus on individual components, providing exhaustive details such as material, finishing, and machining instructions.

- Sectional Drawings

Reveal internal features by slicing through the object, helping to visualize hidden complexities.

- Fabrication Drawings

Provide all necessary information for manufacturing, including dimensions, tolerances, surface finishes, and welding details.
