Example:

A machine costing ₹1,00,000 with a salvage value of ₹10,000 and a useful life of 5 years using the straight-line method:

Depreciation per year = $(₹1,00,000 - ₹10,000) / 5 = ₹18,000$

Sample Question:

A: Depreciation reduces the book value of fixed assets on the Balance Sheet and is recorded as an expense on the Income Statement, thereby reducing taxable income and net profit.

- What are the Methods of Inventory Valuation?

Inventory valuation impacts the cost of goods sold and gross profit. Common methods include:

- First-In, First-Out (FIFO): Assumes the oldest inventory is sold first.
- Last-In, First-Out (LIFO): Assumes the newest inventory is sold first.
- Weighted Average Cost: Average cost of all inventory items during the period.

Each method affects financial statements differently, especially during inflationary periods. FIFO results in higher inventory values and net profit, whereas LIFO shows higher cost of goods sold and lower taxable income.

Sample Question:

A: Accurate inventory valuation ensures that the cost of goods sold and gross profit are correctly reported, which directly influences net income and financial position.
