QuestionAnswer What are the main functions of the immune system covered in Abbas's Basic Immunology? The main functions include defense against pathogens, surveillance against tumor cells, and maintaining immune tolerance to prevent autoimmunity. How does innate immunity differ from adaptive immunity according to Abbas? Innate immunity provides immediate, nonspecific defense mechanisms, while adaptive immunity develops a specific response over time, involving memory cells for faster future responses. What are the key cell types involved in adaptive immunity as described in Abbas? Key cell types include T lymphocytes (T cells), B lymphocytes (B cells), and antigen-presenting cells such as dendritic cells. How do antibodies function in the immune response according to Abbas? Antibodies bind to specific antigens, neutralize pathogens, facilitate phagocytosis, and activate complement pathways to eliminate microbes. What is the significance of Major Histocompatibility Complex (MHC) molecules in immunity? MHC molecules present processed antigens on cell surfaces, enabling T cells to recognize and respond to infected or abnormal cells. Which immunoglobulin classes are highlighted in Abbas for their roles in immune responses? The main immunoglobulin classes discussed are IgG, IgA, IgM, IgE, and IgD, each with distinct functions in immune defense. Sample Structure of an EAACI-Style Immunology Question

To illustrate, here is a typical question template:

Question Stem:

A 35-year-old woman presents with recurrent episodes of urticaria and angioedema. She reports that these episodes are often triggered by certain foods and stress. Laboratory tests reveal elevated serum IgE levels. Which of the following is the most likely immunological mechanism involved?

Options:

- A. IgG-mediated cell destruction
- B. IgE-mediated mast cell degranulation
- C. T-cell mediated delayed hypersensitivity
- D. Complement activation via the classical pathway
- E. Immune complex deposition

Correct Answer: B. IgE-mediated mast cell degranulation

Explanation:

This patient's presentation suggests an immediate hypersensitivity reaction mediated by IgE antibodies. Elevated IgE levels and clinical triggers such as foods and stress align with IgE-mediated mast cell activation, leading to urticaria and angioedema. Understanding this mechanism is critical for diagnosis and management.
