Sample Questions and Model Answers (Based on 2014 Trends)

Question 1: Calculating the WACC

Scenario: A company has the following data:

- Market value of equity: \$5 million
- Market value of debt: \$2 million
- Cost of equity: 12%
- Cost of debt: 6%
- Corporate tax rate: 30%

Question: Calculate the weighted average cost of capital (WACC).

Sample Answer:

- Calculate weights:
 - Equity weight (E/V): $5 / (5 + 2) = 5/7 \approx 0.714$
 - Debt weight (D/V): $2 / (5 + 2) = 2/7 \approx 0.286$
- Calculate after-tax cost of debt:
 - Cost of debt (after tax): $6\% \times (1 - 0.3) = 4.2\%$
- Calculate WACC:
 - $WACC = (E/V \times Re) + (D/V \times Rd \times (1 - Tc))$
 - $WACC = (0.714 \times 12\%) + (0.286 \times 4.2\%) \approx 8.57\% + 1.2\% \approx 9.77\%$

Conclusion: The company's WACC is approximately 9.77%, which can be used as the discount rate for investment appraisal.

Question 2: Investment Appraisal Using NPV

Scenario: A project requires an initial investment of \$100,000 and is expected to generate cash inflows of \$30,000 annually for 5 years. The company's WACC is 10%. Calculate the NPV.

Sample Answer:

- Calculate the Present Value of inflows:
 - Use the PV of an annuity formula: $PV = \text{Cash inflow} \times \text{PV factor}$
 - PV factor for 10% over 5 years = 3.7908
- Determine PV of inflows:
 - $PV = \$30,000 \times 3.7908 \approx \$113,724$

- Calculate NPV:

- $NPV = \text{Total PV of inflows} - \text{Initial investment}$
- $NPV = \$113,724 - \$100,000 = \$13,724$

Conclusion: The project has a positive NPV of approximately \$13,724, indicating it is financially viable.

- Knowledge and understanding of financial management concepts
- Application of techniques to practical scenarios
- Analysis and evaluation of financial data
- Presentation and communication of solutions in a clear, professional manner

Questions ranged from computational tasks, such as calculating the weighted average cost of capital (WACC), to qualitative analysis, like advising on financial strategies.

Detailed Breakdown of Mock Answers

Question 1: Cost of Capital Calculation

Question Summary:

Candidates were asked to compute the weighted average cost of capital (WACC) for a company, given data on debt, equity, cost rates, and tax considerations.

Mock Answer Highlights:

The model answer demonstrated the following steps:

- Calculating the Cost of Debt (K_d):
 - Using the given yield on existing debt or market rate.
 - Adjusting for tax shield: $K_d (\text{after tax}) = K_d (\text{pre-tax}) \times (1 - \text{tax rate})$.
- Calculating the Cost of Equity (K_e):
 - Applying the Capital Asset Pricing Model (CAPM): $K_e = \text{Risk-free rate} + \text{Beta} \times \text{Market risk premium}$.
 - Ensuring the correct inputs and assumptions.
- Determining the Capital Structure:
 - Calculating the proportional weights of debt and equity based on market values.
- Computing WACC:

- $WACC = (E/V) \times K_e + (D/V) \times K_d$ (after tax).
- Showing detailed calculations with rounded figures.

Analytical Observations:

The answer emphasizes clarity and precision, with a step-by-step approach aligning with ACCA's marking scheme. It also discusses the implications of the WACC figure for investment decisions, highlighting its importance in project appraisal.

Key Learning Point:

Candidates should understand that accurate calculation and application of the WACC are critical, and the explanation should clearly demonstrate the rationale behind each step.

Question 2: Investment Appraisal Techniques

Question Summary:

The scenario involved evaluating two investment projects using techniques such as Net Present Value (NPV), Internal Rate of Return (IRR), and Payback Period.

Mock Answer Highlights:

The model solution included:

- Calculating NPV:
 - Discounting cash flows at the company's WACC.
 - Subtracting initial investment to determine net value.
- Calculating IRR:
 - Using either financial calculator functions or interpolation methods.
 - Comparing IRR with the required rate of return.
- Payback Period:
 - Determining the time taken for cumulative cash flows to recover the initial investment.
- Decision-Making:

- Recommending the project with the highest NPV and acceptable IRR and payback period.

Analysis and Evaluation:

The answer discusses the strengths and limitations of each technique, emphasizing that while NPV is the most reliable indicator of value, IRR and payback period provide additional perspectives. It also highlights the importance of considering qualitative factors like strategic fit and risk.

Key Learning Point:

Candidates must not only perform calculations accurately but also interpret results critically, considering the context and limitations of each method.

Question 3: Risk Management Strategies

Question Summary:

The scenario involved advising a company on managing foreign exchange risk arising from international transactions.

Mock Answer Highlights:

The answer covered:

- Types of Foreign Exchange Risk:

 - Advantages and disadvantages of each.
- Recommended Strategy:
 - Using forward contracts to lock in exchange rates for known transactions.
 - Considering options for flexibility in uncertain situations.
- Implementation Considerations:

Key Learning Point:

Students should appreciate the strategic nature of risk mitigation, understanding not just the mechanics but also the broader financial and operational implications.

Common Themes and Examiner Expectations

- Clarity and Structure:

Examiners favor well-organized answers with clear headings, logical flow, and concise language. Proper labeling of calculations and assumptions enhances readability.

- Application of Knowledge:

Pure theoretical answers score less than those demonstrating application to the scenario. Candidates must tailor their responses to the given context, making realistic assumptions where necessary.

Precise calculations with correct formulas and assumptions are vital. Rounding should be consistent, and answers should be checked for arithmetic errors.

- Critical Analysis and Judgment:

Beyond computations, examiners look for insights, evaluation of methods, and recommendations grounded in financial principles.
