- Existing Conditions: Topography, vegetation, water bodies, and existing structures.
- Contextual Relationships: Surrounding land uses, transportation corridors, and cultural landmarks.
- Constraints and Opportunities: Zoning regulations, environmental considerations, and community needs.

Base maps are the foundational layer on which all subsequent drawings are built. They provide accurate geographic and infrastructural information.

2. Conceptual Diagrams

These are rough sketches that explore broad ideas such as:

- Spatial organization
- Circulation patterns
- Connectivity
- Land use distribution

Conceptual diagrams are often hand-drawn or digitally sketched to rapidly iterate ideas, emphasizing clarity over detail.

3. Master Plans

A master plan is a comprehensive, scaled drawing that presents the overall layout of a proposed urban development, including:

- Land uses (residential, commercial, industrial, recreational)
- Road networks and transportation hubs
- Public spaces and green infrastructure

- Building footprints and densities

Master plans serve as a blueprint guiding construction and policy decisions.

4. Sections and Elevations

These drawings provide vertical perspectives:
