Case Studies Highlighting the Interconnection

The Role of Industrial Emissions

Many industries emit pollutants that affect both air and water. For example:

- Chemical manufacturing plants release volatile organic compounds (VOCs) into the air and hazardous chemicals into water sources.
- Regulations targeting these emissions can significantly reduce contamination in both media.

Acid Rain and Water Chemistry

Acid rain forms when sulfur dioxide and nitrogen oxides react with water vapor in the atmosphere. The deposited acid can:

- Lower the pH of lakes and rivers, harming aquatic life
- Leach toxic metals from soil and sediments into water bodies

This illustrates how air pollution directly impacts water quality, demonstrating the importance of integrated analysis.
