Understanding Labour Units in the NECA Manual

Definition of Labour Units

Labour units in the NECA Manual are standardized measures representing the amount of labor (usually in hours) required to complete a specific task or unit of work. For example, installing a certain number of electrical outlets or wiring a circuit may be associated with a set number of labor units.

These units are derived from empirical data, historical project experience, and industry standards. They serve as benchmarks that can be adjusted based on project-specific factors such as complexity, site conditions, labor skill levels, and equipment availability.

How Labour Units Are Used

Estimators multiply the number of units involved in a task by the labor units per task to arrive at total

labor hours needed. This calculation forms the basis for:

- Cost estimation
- Scheduling
- Resource allocation
- Productivity analysis

For example, if installing 50 outlets has a labor unit of 0.5 hours per outlet, the total labor hours would be $50 \times 0.5 = 25$ hours.
