Understanding Stress: Definitions and Types

What is Stress?

At its core, stress is the body's natural response to perceived challenges or threats, triggering a series of physiological and psychological reactions designed to prepare the individual for action—often termed the "fight or flight" response. While mild stress can enhance performance and motivation, chronic or excessive stress can have detrimental effects on health and well-being.

Types of Stress

The Fit and Well 10th Edition emphasizes that stress manifests in various forms, primarily categorized as:
