- Between-Subjects Design: Different groups experience different conditions. E.g., comparing memory performance between music and no-music groups.
- Within-Subjects Design: The same participants undergo multiple conditions. E.g., measuring individual memory performance with and without music.
- Factorial Designs: Testing multiple variables simultaneously, allowing interaction effects to be explored.
- Quasi-Experimental Designs: When random assignment isn't feasible, such as in naturalistic settings.

Martin stresses that choosing an appropriate design hinges on research aims, ethical considerations, and resource availability.

Controlling Confounding Variables

A recurring theme is the importance of controlling extraneous variables to establish causal relationships. Strategies include:

- Random assignment to minimize selection bias.
- Counterbalancing to control order effects.
- Standardized instructions and environment.
