```

```
    print("Adult")
```

```
else:
```

```
    print("Minor")
```

```
```
```

- Loops:

- `for` loops iterate over sequences:

```
```python
```

```
for i in range(5):
```

```
    print(i)
```

```
'''
```

- `while` loops execute as long as condition is true:

```
```python
```

```
count = 0
```

```
while count
print(count)
```

```
count += 1
```

```
'''
```

### 3. Functions and Modules

Functions are blocks of reusable code.

Defining a function:

```
```python
```

```
def greet(name):
```

```
    return f"Hello, {name}!"
```

```
'''
```

Modules are files containing Python code, enabling code reuse and organization.

```
```python
```

```
import math
```

```
print(math.sqrt(16))
```

```
'''
```

### 4. Data Structures

Efficient data management is crucial.

- Lists: Ordered, mutable collections.

```
```python
numbers = [1, 2, 3, 4]
numbers.append(5)
```
```

- Tuples: Immutable sequences.

```
```python
coordinates = (10.0, 20.0)
```
```

- Dictionaries: Key-value pairs.

```
```python
person = {"name": "Bob", "age": 30}
```
```

- Sets: Unordered collections of unique elements.

```
```python
unique_numbers = {1, 2, 3}
```
```
